

The valuation standard

Global Economic Model

There's never been a more efficient or transparent way to improve your upstream strategy.

Our unique Global Economic Model (GEM) allows you to quickly value upstream assets and company portfolios and comes ready with a pre-populated dataset containing both historical and forward-looking proprietary data.

You can customise company, price and tax markers to create bespoke valuations based on your own numbers and assumptions. All tax calculations are in Excel, so the models are also fully auditable.

Our people go further.
Our insight goes deeper.

We give you direct access to **200+** of our expert upstream research professionals located around the world, who have developed unrivalled knowledge of the regions they cover.

Their strong, established relationships with industry contacts takes our primary research to a more detailed level, allowing us to unlock information not available in the public domain.

Giving you access to quality oil and gas data using an incredibly powerful resource:

- Identify, evaluate and screen growth opportunities
- Understand the fiscal, corporate and regional effects of a change in operating environment
- Gain insight into asset profiles, valuations and fiscal terms
- Assess development projects and exploration prospects, including project and fiscal sensitivities
- Evaluate financial performance for assets and company portfolios
- Understand the effect of cost overruns and project delays on asset valuation
- Benchmark competitor portfolios and performance
- Export data into your in-house systems for further analysis

Build your future on our foundations

We've established our industry relationships and knowledge over more than 40 years, giving us an extensive understanding which informs our models and data.

Models

Granular. Have confidence in the accuracy of your valuations with over 235 fiscal models, including fiscal terms data for specific blocks/licences

Thorough. Get the comprehensive fiscal picture using data gathered through publicly available sources and more importantly our strong industry relationships

Customisable. Ensure results reflect your reality by entering your own assumptions and data

Transparent. Trace asset calculations through Excel-based models

Data

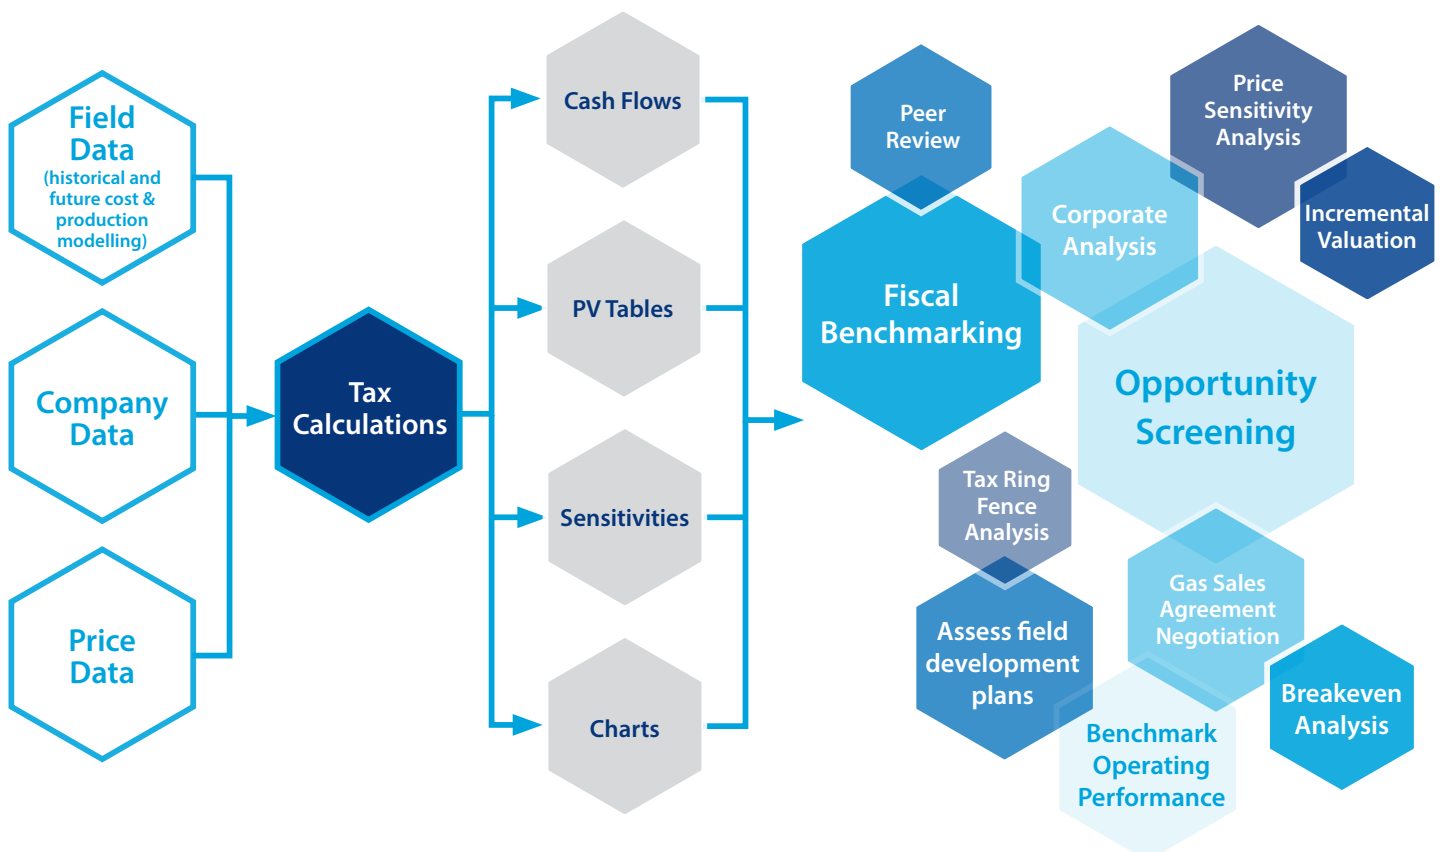

Factual. Run project economics using costs, production and prices which can be tied back to what actually happened historically as well as an informed view of the future

Precise. Strengthen the precision of your valuations with models encompassing a complete history of tax changes as well as the forward looking view
