

PetroView®

See further. Get closer.

Access to historical and factual data is essential for companies operating in upstream oil and gas to analyse the external environment as well as identify and evaluate new opportunities.

PetroView® is an intuitive Geographic Information System (GIS) that provides a global view of current and historical licences, fields, wells, and infrastructure. Speed up your screening processes with flexible querying capabilities and cartographic tools that make your outputs more powerful. Seamlessly extract or import data from your own internal systems for more insightful decisions.

Its customisable tools, alongside continually enriched content, take you far beyond what internal platforms alone can offer by bringing together industry-focused data and functionality that allows both location and attribute information to be analysed simultaneously.

With PetroView® you can:

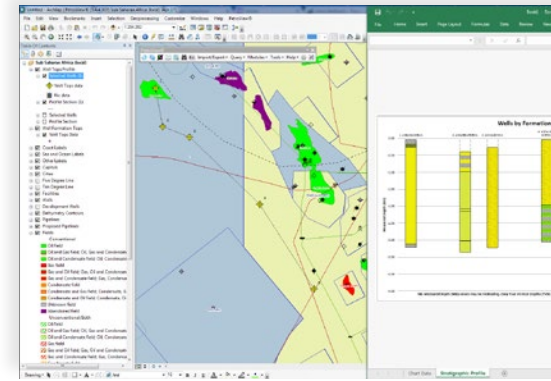

- ✓ Review specific companies and assets in your competitive landscape
- ✓ Overlay your own information onto maps for comparative analysis
- ✓ Work in your preferred format
- ✓ Access key data with a global view
- ✓ Define your own search criteria

Key features at a glance

PetroView's® reliable, trustworthy data has been built up over 40 years and is gathered, cleaned and maintained by our industry specialists. We fill data gaps for new ventures and exploration projects in a format that fits seamlessly into your existing workflows.

It includes coverage of:

- Licences
- Wells (exploration, appraisal, and development)
- Fields
- Infrastructure (facilities and pipelines)
- Surveys (2D and 3D survey locations)
- Cultural data

See further. Get Closer.

Go beyond internal data to get the full picture. PetroView® is designed for you to:

- Perform targeted analysis on current and historic activity by company and region
- Reveal entry points to new markets, potential partners for joint ventures, and/or targets of acquisition
- Look for where new licensing opportunities are emerging and target potential exploration activities using field economic indicators in conjunction with geoscience data
- Use creaming curve and well success ratio functionality to analyse current and historical drilling activity by region, and to identify exploration opportunities with the most potential
- Understand the key reservoir characteristics at play and screen for analogues elsewhere

Whether you need a comprehensive plug-and-play data solution or Esri ArcGIS compatibility for spatial analysis, Petroview® is a cost-effective solution that doesn't compromise on information, quality, or ease of use.
