

Product Overview

Canadian Crude Oil Production Forecast

The most comprehensive & detail-driven forecast of crude oil production in western & eastern Canada.

Woodmac's Canadian Crude Oil Production Forecast offers a bottom-up approach providing detailed supply coverage and project-level production of major oil producing areas in Canada.

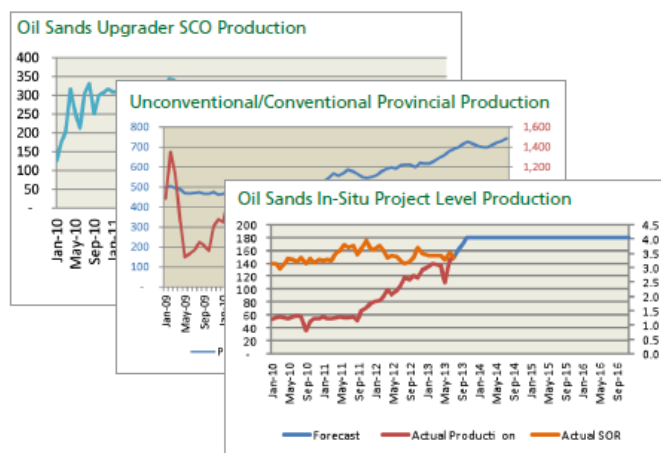

Features

- Every 6 weeks: Five-year forecasting report including the corresponding excel data sheet
- Weekly: Updated report with price & rig effect on Western Canada nonbitumen forecast
- Weekly: Rig breakout examining weekly changes in the major benchmark rig counts
- Dynamic view of public data that incorporates project-level details & changes
- Detailed project-level analysis of the largest producing oil sands projects
- Historical producer trends & scheduled maintenance incorporated in forecasting models
- Forecast includes projects' efficiency measures (Steam-to-Oil ratios) with expectations regarding upgrading crude bitumen conversion performance

The only production forecast to do so, this report incorporates well, project, and upgrader level data along with current market guidance to produce a highly accurate projection for crude production in western and eastern regions in Canada.

This macro view of crude production focuses on the oil sands and offers a detailed forecast for the top producing In-Situ Oil Sands projects and upgraders in Western Canada. This includes specific forecasts for Synthetic Crude Oil (SCO),

Marketable Crude Bitumen and Conventional/Unconventional Crude Oil production. The forecast also includes a detailed analysis of planned maintenance, project specific issues, cyclical movements and discounted future permitted production.

Woodmac's Canadian Crude Oil Production Forecast includes highly accurate production data at the upgrader, provincial and project-level.

Benefits

- Get the most detailed & up-to-date data available with flow production levels calculated on a project level
- Make efficient, smart decisions when you have a report that's compiled & analysed on the growing Canadian crude oil market
- Confirm your in-house analysis & bridge any gaps within your production models
- Unlimited, real-time access to forecast team

Report Methodology & Considerations

This report incorporates provincial well-level data along with oil sands in-situ project and upgrader-level data to provide the most accurate and detailed driven supply forecast report on the market.

The forecast:

- Provides a "bottom-up" analysis and forecast using data covering thousands of individual wells
- Adjusts weekly to the forward curve and indexes to pricing
- Breaks out crude quality including crude bitumen, heavy, light & medium, condensate, and synthetic crude oil production
- Offers in-situ project level analysis using new permitted production, recent financial information, and efficiency gains
- Incorporates upgrader level analysis including adjustments for scheduled maintenance and turnaround time
- Includes a macro-analysis of transportation and storage in Canada including pipeline capacity, pipeline transfers, and rail exports
- Discusses key risk factors effecting production outlook

Designed for you

Traders

Succinct, easy-to-read report analysis on the current state of the Canadian crude market with access to our oil market analysts at your fingertips.

Analysts

Complement your specific forecast analysis with our proprietary production forecasts methodology. Easily incorporate forecast data sendouts into existing customer models.

Portfolio Managers

Obtain a bottom-up macro level view of Canadian crude market and its impact on the broader oil market.

Refiners

Quality level outlook on Canadian crude production including crude bitumen, synthetic crude oil, and conventional light/medium/heavy. In addition, we offer transportation analysis on Canadian crude export capacity and constraints with analysis on the impacts to differentials across grades.

Petroleum Producers

Leverage conventional production outlook by province and detailed oil sands forecasts to identify macro level production trends. We have access to weekly rig reports identifying top operators by province, in addition to recent rig activity.
