

Product Overview

NGLs Pipeline Monitor

Critical insight into raw NGLs and purity products across the US

Features:

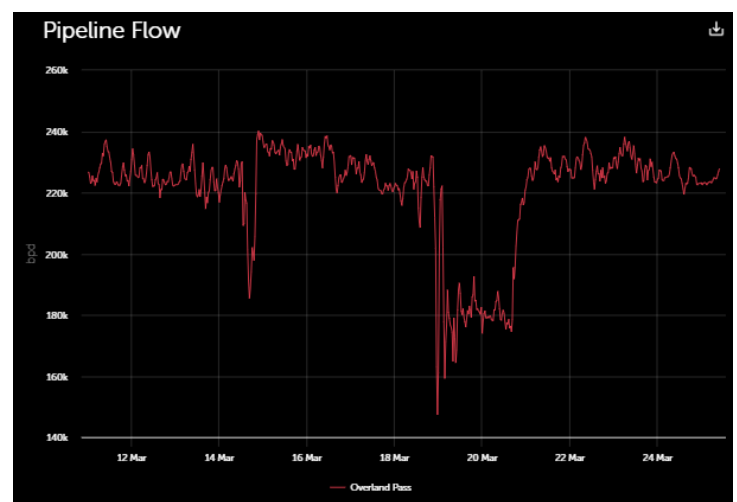

- Monitoring of NGLs pipelines carrying purity grade (ethane, propane, butane, C5+) or NGL mix
- Real-time alerts of significant changes to flows based on Woodmac's proprietary flow data and knowledge of the historical operating profile for each pipeline
- The ability to download flow data for monitored pipelines in 30-minute, daily, weekly or monthly increments
- Daily operational view of individual pipelines that includes several hours of flow history, as well as charts on weekly flow year-on-year and real-time flow
- Transparent representation of exactly which pumping stations Woodmac monitors on each pipeline
- Charts of power consumption at each monitored pumping station

Woodmac employs its proprietary monitoring technology to detect real-time flows on pipelines carrying Y-grade NGLs, diluent and purity products. Based on flow data collected from our sensors and knowledge of historical operating profile for each pipeline, we provide a complete, daily operational view of individual pipelines that includes hours of flow history.

Monitoring efforts are concentrated on pipelines that deliver into Mont Belvieu, the main delivery point for physical NGLs and whose operation largely determines the pricing for LPG futures contracts.

Benefits:

- Real-time operational status updates of pipelines that feed Mont Belvieu can translate into a clear trading advantage in the NGLs and purity products markets
- Access to additional market intelligence as new pipelines are added to the services

Designed for you

Traders

We are the only company to offer real-time insight into feedstock impacts and ethylene cracker operation at the furnace level. Use our updates to identify strategic opportunities to capture price arbitrage from variations in the market created by utilisation changes at crackers and feedstock consumption estimates.

Analysts

Augment your models with detailed, real-time information from our team of analysts. Also understand how changes in utilisation and outages affect short and medium-term supply and demand balances.

Producers

Be in the know of what NGL feedstocks are being impacted in real-time and how changes in demand may affect production pricing.
