

Oil Supply Tool

Assess the future of oil and NGL supply with a detailed **breakdown of our base case view**, which incorporates reserves growth, contingent resources and yet-to-find volumes

Interactive global analytics

2 Long-term annual updates and reports to 2050

Global breakeven cost curve
4000+ supply nodes at 10% and 15% discount rate

600+ Modelled crude streams outlook for production, API and Sulphur

Regular insights and analysis on key issues

New API download feature for closer integration

12 Short-term monthly data updates and reports

115+ countries

Use it to:

Develop a comprehensive supply view based on a fundamental field-by-field methodology

Analyse changes in crude quality and trends for marketed crude streams

Look beyond existing commercial fields to include reserves growth, contingent resources and yet-to-find

Build breakeven cost curves by country, region and resource theme using field level data

Understand the key issues for oil supply

Benchmark future oil supply scenarios
