

## Product Overview

# US Fertilizer Production and Transportation Report

## Features

- The Woodmac Ammonia Index, derived from complete plant utility data & compared to TFI data
- The Fertilizer Production Facility Report showing the relative operating level (100%, 90%...0%) for each plant
- Transportation reports indicating the waterborne movements of urea, UAN & anhydrous ammonia arriving in the US from key international ports, ahead of shipment delivery & US customs registration
- Monthly fertilizer consultant observations on the current state of fertilizer use, demand & plans for various US regions
- Fertilizer-relevant US temperature & precipitation outlooks
- Alerts for potential plant shutdowns, large shifts in production & new vessels expected
- 3-year historical operational data for monitored plants

Gain timely and accurate insight into the state of US fertilizer production and transport to make more informed and strategic daily decisions

Equipped with production-level data for the majority of US nitrogen fertilizer plants and visibility into urea and ammonia imports and river transportation, market participants can gain a more complete understanding of the US fertilizer supply chain to make more informed and strategic decisions.

Woodmac's production, transportation, and fertilizer application data can be used by fertilizer producers, traders, and commodity analysts to anticipate price movements from domestic supply, demand, and import swings. Additionally, the data can be used to inform equity market participants about producers' asset utilization.

Vessels Moored at CF Industries, Donaldsonville Plant Dock

Woodmac uses infrared technology to monitor fertilizer plants at a detailed level

## Benefits

- Gain important insight with highly accurate, measured data & frontrun, established survey benchmarks,
- with longer time lags
- Constantly improve your modelling, assessments & statistics analysis with the most frequent data available in the market
- Determine price movements from domestic supply, demand & import swings
- Learn about producers' asset utilization

## Designed for you

### Analysts

Improve your modelling, assessments, and statistical analysis with the most frequent data available in the market.

### Traders

Determine price movements from domestic supply, demand and import swings to make smarter, more informed trading decisions.
